AWARENESS & TRAINING NEEDS ANALYSIS & PLAN

General

The ISO 27001 standard mandates information security awareness and training to ensure key issues are elevated, and knowledge gaps in the protection of information assets are identified and addressed.

Needs Analysis

To help clients understand where informational gaps exist across their organization, and to ensure investments in awareness and training is focused on the greatest impact to the organization, CIMA performs a formal Awareness and Training Needs Analysis.

Our Needs Analysis involves interviews with organizational stakeholders, as well as reviewing historical internal documentation to uncover fact-based data on areas that challenge the organization's ability to protect sensitive information assets.

A report of findings is produced that will become part of the official Awareness and Training Plan.

Plan Development

As an integral part of the overall process, CIMA will take the information learned from the Needs Analysis and perform a series of workshops with key management personnel in your stakeholder community to drill down and scope out awareness and training initiatives.

Upon completion, CIMA will produce a comprehensive documented plan for your Information Security Awareness and Training Program.

What You Get

A document that begins with the findings of the Needs Analysis, followed by a comprehensive plan document detailing how to address the organization's informational and knowledge gaps.
