PROJECT, PROGRAM & PORTFOLIO MANAGEMENT

General

The implementation of an ISO 27001 information security management system and GDPR / Data Privacy Program can be overwhelming. Having someone with strong expertise and experience at the helm, helps to steady the ship and allow it to reach its intended destination, ensuring your business goals are achieved.

Program Office Setup

Due to the sheer magnitude and interrelation of these programs, many organizations establish a project management office within the Information Security or Data Privacy Department that follows established protocols put in place by the Enterprise IT Project Management Office. CIMA has the experience to help you set this up and to provide ongoing program and portfolio management support, as well as managing individual projects.

Project, Program and Portfolio Management

CIMA expertise includes documenting project charters, developing project plans in Microsoft Project and other tools, establishing Steering Committees, managing project and Steering Committee meetings, managing and tracking program progress, managing scope and change, communications, development and presentation of management report and much more.

What You Get

During a typical engagement clients receive standard project documentation e.g. charter and plan, weekly and monthly status reports, etc. Every engagement is setup to meet the unique information needs of the client. We work your way!
